NPI DART - The Fastest, Most Comprehensive NPI Database Tool Available

Pennington, NJ: Archi-Tech Systems, Inc. has announced NPI DART, combining its remarkable DART technology with an enriched version of the NPI Database. With it, customers have unparalleled access to this critical repository of healthcare professionals and organizations.

“The NPI Database is a unique and increasingly-rich ‘true universe’ of all healthcare entities and individuals,” said Paul Gray, Archi-Tech President, “Having this amazing directory of healthcare professionals and organizations at your fingertips delivers a strategic advantage. Its caliber and breadth of information is growing, content quality is improving, and it is becoming the *de facto* enumeration scheme across all of pharma.”

Archi-Tech’s unwavering objective is to take disparate data, integrate it and serve it up to its clients in easy-to-use, rapid access technologies. Archi-Tech has loaded the entire 5.4M-record NPI Database into DART, the fastest data retrieval tool on the market. Archi-Tech has enhanced the NPI data by linking it to the following critical data sources:

- **OPA 340B Covered Entities Identifiers.** All facilities approved by OPA as eligible to provide drugs through the 340B program.
- **Medicaid Exclusion Status.** All entities opting to bill Medicaid for the 340B drugs used for their Medicaid patients. Used to facilitate the prevention of duplicate discounts.
- **Medicare Provider Type Specialty Description.** Organizes NPI taxonomies into logical groupings. Examples: Endocrinologists, Acute Care Hospitals, Skilled Nursing Facility, etc.

In addition, Archi-Tech has added additional attributes to the data by applying “added value” processes.

- **Groups.** Archi-Tech has developed processes to create “inferred groups,” matching prescribers to entities and assigning a match confidence rating.
- **Core Based Statistical Area Alignment.** Data can be viewed by CBSA geo definitions

The NPI DART can also be customized by individual client subscriptions to include Rx and Sales Data, Sales Alignments, Segments, Claims Data, etc.

Use NPI DART to:

Research HCPs

- Rapid Lookup Capability, by name/location/specialty
- Generate Excel Exports of All HCPs by Taxonomy Code or Medicaid Specialty, by State or CBSA
- Import NPI IDs, to attach complete HCP demographics
- Validate NPI IDs on incoming files, via import functionality

Track/Analyze Healthcare Organizations

- Rapid Lookup Capability – by name/location/taxonomy/specialty
- Generate Excel Exports of All Organizations by Taxonomy Code or Medicaid Specialty, by State or CBSA
- Find groups of HCPs associated with Organizations
- Import NPI IDs – to attach complete Organization demographics
- Validate NPI IDs on incoming files, via import functionality

Keep Up to Date on Covered Entities and 340B Status

- Monitor New Entrants or Changes To Existing Members' Status
- Covered Entity Profiles: Search by 340B Identifiers and Attributes
- Keep Apprised of Medicaid Exclusions, and current status

Native DART functionality gives you:

- Full command of all 5.4M records, at your fingertips, offline – no connection required.
- The ability to perform even complex searches on any combination of attribute – name, state, taxonomy, specialty, etc. – for organizations or individuals, getting results in seconds.
- Ability to export any attributes of the search results, grouping and aggregating in any way if needed – by taxonomy, Medicaid Specialty, geo area, etc.
- Store search, list and export templates and save macros making it easy to re-run important scenarios with a single click.

“Multiple departments – sales ops, finance, contracting, chargebacks, etc. – seem to be looking for a painless way to mine this critical database,” added Paul, “With NPI DART, they have a valuable database and mining tool that can be used for everything from performing look-ups, to generating mailing lists, to facilitate sales planning.”
